DISCIPLINE

Project & Construction Management

COURSE INTRODUCTION

The practice of project management is now widely applied in business, industry, and all levels of government to meet organizational goals, increase productivity and optimize resource utilization. Supervisors, middle managers and executives in mature organizations are now actively involved in program and project management.

In recognition of this significant business trend and the highly specialized conceptual and managerial skills it demands for success, this intensive course is designed to provide professionals involved in project management with a powerful background and experience. Course content integrates the latest in academic and research findings, state of the art practices and technologies, along with valuable practical lessons and insights.

Participants will learn in an open and participative environment advanced techniques applicable to each stage of the project life cycle including initiation, planning, execution,

and control. They will apply the tools and techniques presented to case studies that simulate real projects.

COURSE OBJECTIVE

Providing the participants with advanced knowledge and skills necessary to:

1. Recognize and manage the phases of project life cycle
2. Analyze the project content
3. Accurately estimate activity durations and costs and develop activity schedules
4. Manage project resources
5. Manage project risk
6. Develop and manage the project team
7. Communicate effectively with project stakeholders assure quality in project

Deliverables
